With COLLInstant® LMW, Viscofan has developed a highly efficient collagen hydrolysate with a low molecular weight ≤ 1000 Da and a favorable peptide profile according to the latest scientific knowledge. Its clinically tested fast and profound effects, the ease of use and its high acceptance rank COLLInstant® LMW as next generation cosmeceutical.

VISCOFAN
COLLInstant®
LOW MOLECULAR WEIGHT
PREMIUM COLLAGEN HYDROLYSATE

CLINICALLY EFFECTIVE

In a six week clinical trial COLLInstant® LMW reduced wrinkle volume & area, increased skin hydration around the eyes and improved skin elasticity.

EFFICIENT FORMULA

COLLInstant® LMW contains a high amount of bioactive glycine- and proline-rich peptides (Gly-X-Y). In a clinical study, a daily intake of 2.5 g for 6 weeks was sufficient to elucidate beneficial effects on skin health.

FAST ACTING

Small collagen di- & tripeptides are quickly and highly bioavailable. The stable bioactive collagen components are actively absorbed in the digestive tract and transported to joints, muscles and especially the skin.

Collagen is an essential structural component of the skin that supports its flexibility, firmness and elasticity. Aging processes cause collagen loss in the dermis that leads to a deterioration of skin health and appearance, often aggravated by environmental conditions or dermatological disorders. Wrinkles, sagging skin and loss of facial contours are the result.

EXPERT MANUFACTURING

The gentle processing of very pure, natural bovine collagen type I & III followed by proprietary enzymatic digestion yields a clean-label, unbleached hydrolysate without additives or preservatives. The light yellow powder is allergen-free.

1st BOVINE LMW COLLAGEN

Our COLLInstant® LMW is the first bovine collagen hydrolysate in the market, providing a beneficial amino acid profile that serves as building material and stimulator for the synthesis of new collagen, elastin and hyaluronic acid in the skin.

IDEAL FOR PROCESSING

- dust-free formula, free-flowing properties
- quickly soluble – even in cold water
- excellent dispensing & dosing
- for all taste- and texture-compositions
- value-adding high protein content (>92%)
